## About biotechrabbit

**biotechrabbit** innovates, develops and manufactures molecular biology products with superior performance for diagnostics, life science research and applied markets. All development, production and logistics take place in our Berlin facility.

**Molecular biology enzyme and protein production** is the cornerstone of biotechrabbit's offering. We use high density prokaryotic and eukaryotic fermentation followed by several fine-tuned purification steps to deliver highly pure proteins. Capacities range from small to large-scale production.

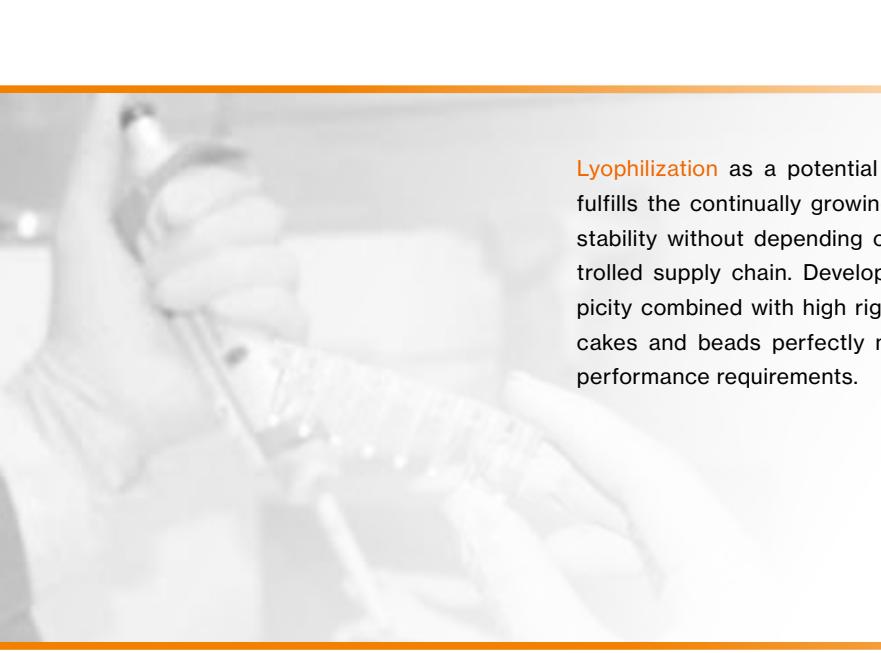

**The research and development department** with experienced scientists and business developers is emphasizing on customers and partners' needs. The team is highly engaged in providing top-quality products for molecular biology applications.

ISO 13485:2016 and ISO 9001:2015 certification exemplify biotechrabbit's commitment to the highest quality standards. The scope of our quality management includes: design and development, production, marketing and distribution of molecular biology products, proteins and reagents for in-vitro diagnostics.

Quality control analyses after each key production step secure product performance. Sophisticated activity analysis in conjunction with purity, concentration and contamination tests confirm the consistently high quality of all biotechrabbit products.

**Lyophilization** as a potential final processing step fulfills the continually growing demand for product stability without depending on a temperature-controlled supply chain. Developed for low hygroscopicity combined with high rigidity, biotechrabbit lyo cakes and beads perfectly match all stability and performance requirements.

## About biotechrabbit

---

Scientists around the world are working to leap ahead of diseases and to improve our lives with innovation. Aside from brilliant minds and relentless passion, the success of science depends on the quality of the materials used.

biotechrabbit is determined to offer the best products and services to those who lead the way in research. The valued relationships with our partners and customers drive us to exceed current limitations with flexibility, innovation and customized solutions to match their specific requirements. Each member of our team of highly engaged scientists, experienced managers and talented business developers aims to facilitate our partners and customers to leap and lead progress in the life science.

Our way of doing business combines the passion and pure curiosity of excellent researchers with the agile spirit of true entrepreneurs.
